

Luis Felipe Álvarez

Senior Full Stack Developer

Summary

- Experienced Python and Django full stack Developer with more than 5 years of experience.
I feel comfortable writing unit tested code, creating Object-Oriented Code and decoupling code.
About deploying and continuous delivery, I like to implement infrastructures that allow development teams to push and see their work automatically deployed and working.

Experience

2011-07 - present

- **Full Stack Developer**
Fundación Ciudadano Inteligente
Ciudadano Inteligente is an NGO with offices in Chile and Brazil, that aims to improve democracies in Latin America. My job is to create platforms that increase participation, transparency, and engagement with public issues.
During the year 2018 I took the previously developed platform VotaInteligente to the brazilian elections. This resulted in 2 platforms:
 - MeRepresenta.org.br: One of the main electoral platforms for getting information for who to vote. (Brazil - 2018)
 - RioPorInteiro.org.br: A platform that allows citizens to create proposals and candidates committing to those proposals. (Brazil - 2018)In previous years I participated in the ideation and development of VotaInteligente, a platform that helps citizens (and Civil Society Organizations) create proposals and candidates to an election to commit publicly with those proposals.

Education

2003-03 - 2010-09

- **Universidad Austral de Chile, Ingeniería Civil en Informática**

Certificates

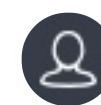

2018-08

- Mathematics for Machine Learning Specialization (Coursera)

Interests

- Climbing
- Circus acrobatics
- Drama
